

STEPHEN CANNING | CHIEF TECHNOLOGY OFFICER

## OVERVIEW

PayGlobal has two reporting engines, Report BuilderPro and Exolvo Reporting Services (ERS), which takes advantage of SQL Server Reporting Services (SSRS). These engines deliver timely information throughout your business. PayGlobal has a library of standard reports for you to pick and choose from; alternatively customised reports can be produced. ERS is the stand-alone reporting engine for users who wish to write their own customised SSRS reports and include PayGlobal user profile security parameters. Report BuilderPro is used by PayGlobal's grid reporting tool and delivers some of our complex compliance reports. PayGlobal provides existing standard reports in Report BuilderPro along with a selection of SSRS reports for use with ERS.

### KEY ADVANTAGES OF ERS

● **ERS is a separate product, therefore:**

- You have the ability to update reports and manage reports separately from the PG application
- There is a easy-to-use interface
- PayGlobal can deliver new reports to you quickly
- Report improvements/upgrades are delivered independently from the PG application upgrades (i.e. PayGlobal is able to deliver reporting changes without requiring you to upgrade PayGlobal)

● **ERS is a easy-to-use reporting tool, so:**

- With SQL Report writing experience you can create your own customised reports and publish them directly from PayGlobal, or PayGlobal can be commissioned to write a report for you
- The need to engage PayGlobal Development resources to produce complex reports is minimised, thus ERS significantly lowers the cost of maintaining your custom reports (and SQL report writing skills are available from many consulting firms)

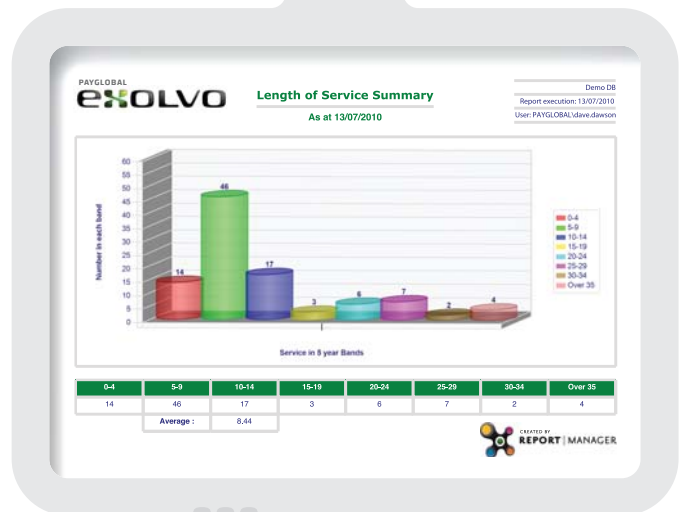

● **Gives you flexibility and security when you generate reports:**

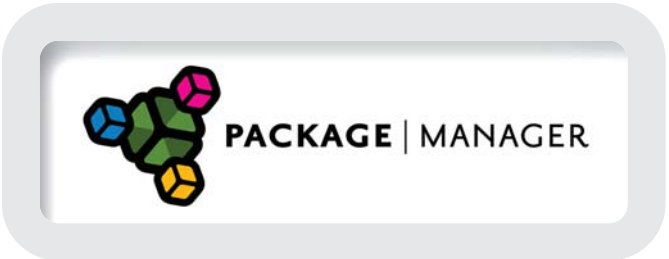

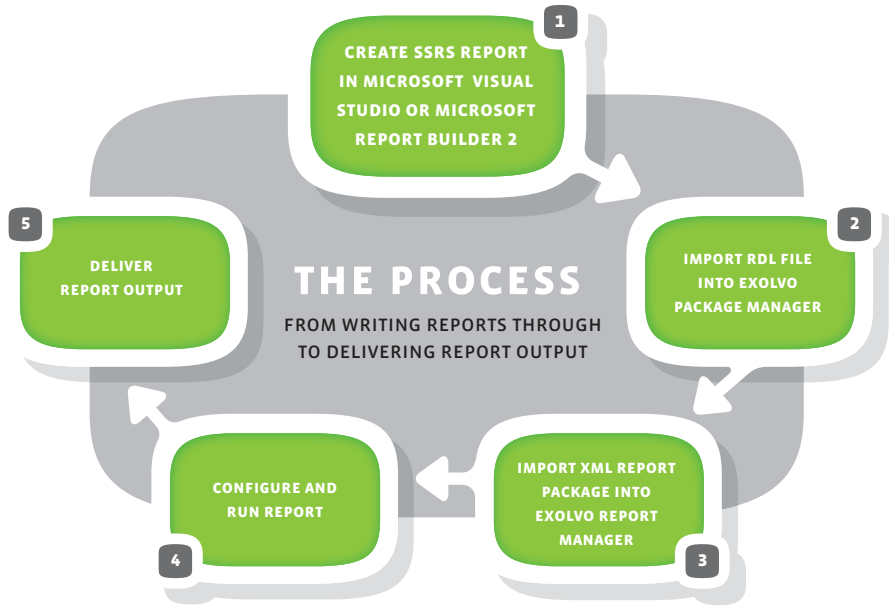

- Excellent parameter management, splitting and report group management
- Secure reporting parameters, allowing for a secure security model (e.g. limit employees viewable based on security queries)
- Good roles and group security
- Easily searchable report library management

- Provides a **number of file formats and delivery methods**, including PayGlobal document management, file and email

- Provides **excellent report presentation**

- It is an **industry recognised** standard product which offers modern, robust and powerful reporting

**REPORT MANAGER**

The Report Manager provides a clean, modern interface that allows users to import, maintain, execute and deliver their SSRS reports in a PayGlobal context. It also provides excellent security facilities for restricting access to reports and application features. In addition, it gives the user the ability to upload simple reports for use in Exolvo Self-Service.

**PACKAGE MANAGER**

The ERS Package Manager allows you to package your RDL files created by PayGlobal or an authorised partner. You can then import the packages into ERS Report Manager. ERS Package Manager is the first step in allowing you to integrate and run your SSRS reports in the PayGlobal reporting system.
