Automate Office Work

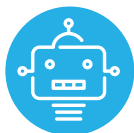

M-Files supports multiple use cases across industries – even the highly regulated ones. Workflows and solution templates let you easily automate office work and upgrade your information management processes to the new era.

Easily manage content in context

M-Files lets you manage information based on what it is rather than where it is located. The metadata-driven and repository-neutral approach lets users manage and organize content in context regardless of where it is stored. Finding and managing information has never been so easy.

Classify Content Automatically

M-Files uses artificial intelligence to analyze, categorize, and tag information automatically. This helps users to file data with correct metadata and hence makes finding business-critical information faster. You can also manage all kinds of business records like customers and cases, not just documents. Let M-Files work for you to allow employees to focus on business rather than document management.
